

# EMMANUEL ADELOJU

UX Researcher | Human-AI Interaction | Mixed Methods | LLM Evaluation  
eadeloju[at]asu[dot]edu | [LinkedIn](#) | [Portfolio](#)

---

UX researcher specializing in mixed-methods research (qualitative + quantitative) for human-AI products. Experienced designing and psychometrically validating survey instruments, running longitudinal qualitative studies, and building reliability-tested behavioral codebooks. Background evaluating LLM-based tools and translating findings into actionable product and stakeholder recommendations.

## SKILLS

**Qualitative Methods:** User interviews, think-aloud protocols, contextual inquiry, journey mapping, behavioral coding, content analysis, thematic analysis, usability evaluation, survey design & validation

**Quantitative Methods:** Experimental design, A/B testing, regression, ANOVA, factor analysis, descriptive & inferential statistics

**AI / LLM:** LLM evaluation, responsible AI, bias/risk assessment, human-AI interaction research, model behavior analysis

**Tools:** Figma, Miro, Qualtrics, MAXQDA, SPSS, Excel | Python, R, SQL

## SELECTED EXPERIENCE

**UX Researcher, Human-AI Interaction (Dissertation)** | *Arizona State University* (Sep 2025 – Present)

- Led a 6-month longitudinal mixed-methods study of educators' adoption of LLM tools, mapping their 3-stage user journey (learner → designer → implementer) via interaction analysis, interviews, and think-aloud sessions
- Built a 6-code behavioral codebook to identify friction points and recovery strategies in real-time human-AI interaction, producing an auditable observation-to-insight pipeline
- Built a custom collaborative qualitative coding tool (Google Sheets + Apps Script, developed with Claude Code) since existing software proved unworkable for multi-coder analysis, enabling our team to code and reconcile in shared real time
- Translated findings into design recommendations for AI tool onboarding, scaffolding, and trust calibration
- Designing an LLM evaluation benchmark that operationalizes data-sensemaking as a measurable human-AI interaction task

**Ongoing Lab Research** | *Arizona State University* (Sep 2025 – Present)

- Mapped the socioemotional risks of generative AI across 49 K-12 AI US states guidance documents using a CASEL-based framework; presented at CVPR 2026
- Mixed-methods study of university students' social-emotional relationships with generative AI, translating interaction patterns into design principles prioritizing user agency and wellbeing

**Program & Research Lead Analyst** | *UL Research Institutes & Arizona State University* (2024 – 2026)

- Led mixed-methods UX research and end-to-end program evaluation across 23 educators and 5 student fellows in 8 US states
- Co-developed and psychometrically validated survey instruments across multiple measurement waves, ensuring construct validity and longitudinal comparability
- Ran descriptive and inferential analyses on formative/summative survey data; recommendations adopted directly by program leadership
- Synthesized user interviews into journey maps and first-authored evaluation reports presented to university leadership and industry partners and at national and international conferences

**Graduate Teaching Assistant, Applied Statistics** | *Arizona State University* (Spring 2025)

- Taught and led labs in applied statistics (regression, ANOVA, hypothesis testing) to graduate students across an 18-module curriculum in SPSS and Excel

## EDUCATION

**PhD, Learning Literacies & Technology**, Arizona State University (ABD, Expected 2027)

**MSc**, University of Lagos, 2022

**BSc**, Osun State University, 2016

## PUBLICATIONS & MOST RECENT RECOGNITION

- 3 peer-reviewed papers, 4 manuscripts under review, and multiple conference presentations on human-AI interaction and LLM evaluation (full list available on portfolio site or at request)
- CVPR 2026 Broadening Participation Scholarship · 2026 College Dissertation Research Grant · 2025 Mary Lou Fulton Endowment Scholarship
